EDUCATION

- Thapar Institute of Engineering & Technology, Patiala**
Bachelor of Engineering – Computer Science & Engineering; CGPA: 7.51 August 2023 - May 2027
Courses: Introduction to Computer Programming, Operating Systems, Computer Architecture, Data Structures and Algorithms, Object Oriented Programming, Computer Networks, Machine Learning, Software Engineering, Data Engineering, Database Management Systems, UI & UX Specialist, Test Automation, Calculus.
- Central Board of Secondary Education**
Senior Secondary - 12th; Percentage: 88.6% April 2021 - March 2023
- Central Board of Secondary Education**
Secondary - 10th; Percentage: 91.4% April 2020 - March 2021

SKILLS SUMMARY

- Programming Languages:** Java, C++, JavaScript
- Backend Technologies:** Spring Framework (Spring Boot, Spring Data JPA, Spring Security, JWT), Hibernate, WebSocket API
- Frontend Technologies:** HTML5, CSS3, JavaScript, React.js, Bootstrap
- Databases:** MySQL, MongoDB
- Tools:** VS Code, IntelliJ IDEA, Eclipse, Git, GitHub, Maven, Postman

PROJECTS

- Skills Swap:** [\[GitHub\]](#) | [\[Live\]](#) | [\[Swagger\]](#)
Tech Stack: Spring Boot, WebSocket API, MongoDB, React.js,
 - Description: Developed a full-stack platform that enables users to exchange skills through barter-based learning and collaboration.
 - Role: Designed and implemented scalable backend services, including authentication and authorization, profile management, barter post and request workflows, skill discovery, admin dashboard features, real-time messaging with WebSocket, API documentation using Swagger.
 - Technologies Used: Spring Boot, Spring Security, JWT Authentication, MongoDB, React.js, WebSocket API, REST APIs, Swagger, Git/GitHub
 - Outcome: Implemented secure authentication, profile verification, skill-based search, barter request management, admin controls, and real-time one-to-one messaging.
- Cab On Campus:** [\[GitHub\]](#) | [\[Live\]](#) | [\[Swagger\]](#)
Tech Stack: Spring Boot, React.js, MongoDB
 - Description: Developed full-stack campus cab booking platform for students, and drivers within Thapar University, handled by admins.
 - Role: Designed and developed the backend APIs, authentication system, database integration, exception handling, and contributed to frontend.
 - Technologies Used: Java, Spring Boot, Spring Security, JWT Authentication, MongoDB, React.js, REST APIs, Git/GitHub, Java Mail Sender.
 - Outcome: Implemented secure JWT-based login and role authorization, scalable backend architecture, DTO-based clean API design, error handling, and frontend-backend integration.
- Fest Track:** [\[GitHub\]](#)
Tech Stack: Spring Boot, React.js, MongoDB
 - Description: Developed full-stack event management, ticket booking platform that allows organizers create and manage, Users to book tickets.
 - Role: Designed and developed the complete backend architecture including JWT authentication, role-based access control, booking workflows, payment verification system, geospatial event discovery, email integration, and REST APIs. Also contributed to frontend integration.
 - Technologies Used: Spring Boot, Spring Security, JWT, MongoDB, Geospatial Queries, GeoJSON, React.js, REST APIs, Java Mail Sender.
 - Outcome: Implemented secure authentication and protected APIs, built a real-world booking lifecycle with payment states and ticket verification, integrated MongoDB geospatial search using 2dsphere indexing, and strengthened understanding of scalable backend architecture, DTO-based API design, workflow validation, and frontend-backend integration.
- Family Tracker:** [\[GitHub\]](#)
Tech Stack: Spring Boot, MongoDB, WebSocket API, React.js
 - Description: Developed real-time family tracking platform that enables users create, join multiple family groups, securely share live locations.
 - Role: Designed and developed the complete backend architecture, including JWT authentication, role-based authorization, family management workflows, real-time location sharing using Web Sockets, REST APIs, and API documentation with Swagger, contributed to frontend integration
 - Technologies Used: Spring Boot, Spring Security, JWT, MongoDB, Geospatial Queries, Web Sockets, React.js, REST APIs, Java Mail Sender.
 - Outcome: Implemented secure authentication and multi-family access control, enabled real-time location synchronization through Web Sockets, built scalable REST APIs for family and location management, and strengthened understanding of backend architecture, real-time communication, DTO-based API design, and frontend-backend integration.

DSA & CODING PROFILE

- Solved **600+** **Data Structures & Algorithms** problems across **Leetcode**, **Code360**, and **GeeksforGeeks**.
- Strong in **Arrays**, **Trees**, **Graphs**, **Dynamic Programming**, **Recursion**, and **Greedy**
- Consistent problem-solving practice with **badges & active streaks** across all Platforms.
- Implemented solutions using **Java** with focus on clean logic and edge-case handling.

CERTIFICATIONS

- Java (Basics), Hacker Rank:** [\[VIEW\]](#)
- JDBC Servlets and JSP - Java Web Development Fundamentals, Udemy:** [\[VIEW\]](#)
- Spring Boot & Spring Framework, Udemy:** [\[VIEW\]](#)
